1. LAYOUT: should be something similar as this or if have better idea can discuss:

2. Working idea: First operator come, put his ID, the WorkOrder ID, and his PT And he press "START". When pressing start all the cells should be cleaned automatically so next operator can fill also his ID, work order,PT and also press 'START". Like this as many operator as possible.

3. SITUATION: LUNCH TIME, first operator come, and he put his ID, automatically should the the WO that he is working in, then he can press "PAUSE", and go to have lunch, same can do the rest of the operators. Later when come back, again, they put their ID, and will show automatically the WO and they can press again " START".

4. Once every every operator, press start, as said before should clean the cells, and also the "start botton" should disabled, so they don't get confuse and try to start again.

5. This Gui will be in different laptops, and all the information should be saved in the same excel file. Where this excel file should have the columns as this:

Date	PT	ID 工号	Wo 工单号	Total Time (min)	Issues
20/2/2024	PT400	456	X226548	250	

6. This excel file, each 2 weeks should automatically save a back up, and clean the old data, so it will not get very heavy.
